

Photovoltaic system in operation: milestone on the road to energy independence

We are pleased to announce the successful commissioning of our new photovoltaic system. With the gradual installation of over 1,000 solar panels on seven rooftops at the company headquarters in Sevelen, we have taken a significant step towards true energy independence. The system has an impressive total output of 317 kWp and will generate around 317,000 kWh of environmentally friendly electricity.

In order to optimise the use of the solar energy generated, a powerful energy storage system with a capacity of 556 kWh was also installed. This storage system makes it possible to store surplus energy and retrieve it flexibly when needed. As a result, we can not only increase energy efficiency, but also significantly reduce our dependence on external energy sources.

Dear readers, dear friends of Textilcolor

Firstly, I would like to thank you for your loyalty to Textilcolor. Especially in these difficult times, when the world is going crazy, partnerships with customers and suppliers are very important. A stable supply chain remains one of the essential aspects of our company. Fast feedback, reliable deliveries and predictable delivery times should be a matter of course.

In recent months, we have continued to work on new products and have been able to refine our energy-saving concept. We have been able to „backward integrate“ further products into our production and thus work more flexibly.

Our new photovoltaic system has kept us busy for months, with roofs having to be renovated, countless new cables having to be laid in the factory and, most recently, the entire transformer station having to be reinstalled. We are proud of our team for completing all these tasks without interrupting production.

The most significant progress, however, is that we have installed more than 1,000 photovoltaic modules in our company and are storing and distributing all the electricity generated with a large battery - which is currently unique in Switzerland. With a planned total output of an impressive 317,000 kWh, we will be able to cover a significant proportion of our electricity requirements ourselves.

This not only represents an important step towards sustainability, but is also an important statement for the future of our company.

Thank you for your loyalty and for your partnership in Textilcolor AG.

Your Textilcolor AG
Detlef Fischer

TECONYL BLACK N-HCR

Highly concentrated acid dye for dyeing
polyamide and silk

TECONYL Black N-HCR,
the remarkable acid black

- Highly concentrated
- Free of heavy metals
- Suitable for polyamide and silk
- Suitable for exhaust dyeing and printing
- Very good shade build-up
- Very good fastness to chlorinated water
- Very good light fastness
- Good wet fastnesses
- Suitable for Oeko-Tex Standard 100
(Class II-IV)
