

## ECODYE BIO Next Level Sustainable Dyeing

The sustainable dyeing of polyester with ECODYE PES, the ecologically optimized rapid dyeing process for disperse dyeing on PES, is already known worldwide. Both for our planet and from an economic point of view, this technology offers many advantages. Nevertheless, we were able to further develop and improve the essential ingredient, the leveling agent Ecodye.

The improved technology is biodegradable and dosable.

Ask our colleagues from technical sales for documents and samples. We will be pleased to support you with the implementation of this project.

Dear readers,  
dear friends of Textilcolor,

What a year! In January, we thought that after two years of Covid, the world would be a different one and that things would get better for everyone. In March, after the attack of Russia on Ukraine, we were taught better.

The small upswing was relatively quickly over and the prices of Intermediates and the situation with the pre-suppliers worsened again in extremis.

Due to a very high stock level we were always able to deliver and only in very rare cases we had to contact you regarding delays.

Since the summer the prices for energy, gas and oil have risen extremely. We had to adjust our prices again. Many thanks for your understanding in this regard.

We are committed to continue to serve you as a partner through close cooperation. Our energy saving brochure has been very well received and appreciated by customers. We hope that you can also benefit from it. Our technicians will be happy to implement this together with you.

Now I wish us all a Merry Christmas and a Happy New Year. Much success and peace for the future.

Kind regards,  
Yours Detlef Fischer

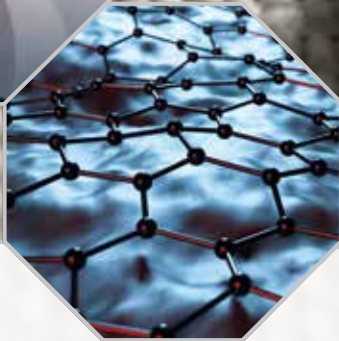

Managing Director Textilcolor AG

The entire Textilcolor Team would like to thank you for your trust in our company and wishes you and your families a merry Christmas.

We look forward to a continued good and successful cooperation.

# With TEXTILCOLOR AG you are well (pre)finished

## Your competent partner in the field of finishing and coating!

With innovative and sustainable technologies, we help our customers achieve the best possible performance every day. The use of innovative and renewable raw materials, as well as energy and resource savings in the application of our products, are a natural part of our daily work.

Please ask our colleagues for our guideline **Finishing**.  
They will be pleased to support you with all kind of questions.
